Set up GitHub Copilot

Use GitHub's AI pair programmer to autocomplete suggestions as you code.

Get started with GitHub Copilot

Add collaborators to this repository

Search for people using their GitHub username or email address.

Invite collaborators

Quick setup — if you've done this kind of thing before

HTTPSSSHhttps://github.c

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# Lit-buddy" >> README  
git init  
git add README.md  
git commit -m "first commit"  
git branch -M main  
git remote add origin https://  
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://  
git branch -M main  
git push -u origin main
```

ProTip! Use the URL for this page when adding GitHub as a remote.
